

NEW FAUNISTIC DATA CONCERNING SCELIONID FAMILY (HYMENOPTERA: SCELIONIDAE) FROM THE REPUBLIC OF MOLDOVA

GÎRNEȚ Mariana

Abstract. The paper is based on the studies accomplished on the territory of the Republic of Moldova in the period 1991-2007. As result, 59 species of scelionids from 20 genera were registered: *Anteromorfa*, *Anteris*, *Apegus*, *Baeus*, *Eremioscelio*, *Gryon*, *Scelio*, *Duta*, *Telenomus*, *Trissolcus*, *Trimorus*, *Teleas Idris*, *Tiphodytes*, *Thoron*, *Xenomerus*, *Probaryconus*, *Psilanteris*, *Platytenomus*, *Macroteleia*. At the same time, we mention that the species: *Eremioscelio cultratus*, *E. tauricus*, *E. ukrainica*, *Scelio fulvipes* and *Macroteleia rufa* were recorded as new for the fauna of the Republic of Moldova.

Keywords: Scelionids, useful insects, monitoring.

Rezumat. Noi date faunistice privind familia scelionidelor (Hymenoptera: Scelionidae) din Republica Moldova. La baza lucrării au stat cercetările efectuate pe teritoriul Republicii Moldova în perioada 1991-2007. Ca rezultat, au fost evidențiate 59 specii de scelionide din 20 genuri: *Anteromorfa*, *Anteris*, *Apegus*, *Baeus*, *Eremioscelio*, *Gryon*, *Scelio*, *Duta*, *Telenomus*, *Trissolcus*, *Trimorus*, *Teleas Idris*, *Tiphodytes*, *Thoron*, *Xenomerus*, *Probaryconus*, *Psilanteris*, *Platytenomus*, *Macroteleia*. Totodată, menționăm că speciile: *Eremioscelio cultratus*, *E. tauricus*, *E. ukrainica*, *Scelio fulvipes* și *Macroteleia rufa* au fost identificate ca specii noi pentru fauna Republicii Moldova.

Cuvinte cheie: Scelionide, insecte folositoare, monitoring.

INTRODUCTION

Along with the development of optic devices, the attention of entomologists was directed to microhymenopterans, which represent an extremely divers group with great economic importance. Many of these microhymenopterans are oophagous parasitoids, which lay their eggs in other harmful insects laying (FABRIȚIUS & POPOVICI, 2007).

A special value in hymenoptera fauna studies in Moldova has the work of Talitkii V. Thus, in the late 1950's under his leadership the research of entomophagous orchard pests was initiated. The study involved the order Hymenoptera including scelionids. As a result of this research, it was published the catalog of hymenoptera in Moldova with 119 species of scelionids (TALITKII & KUSLITKII, 1990).

Subsequently, at the beginning of 1960's, Plugaru S. (PLUGARU, 1975) starts the study and evidence of forest pests and parasites, including scelionids. KIRIAK (1980) has also contributed considerably to the emphasizing of parasitic hymenopterans. As part of this research, it was also partially studied the fauna of scelionids.

An outstanding contribution to the study of scelionid fauna from Moldova had the researchers M. Kozlov and S. Kononova, which revealed several new species for the country fauna, as well as for science.

MATERIALS AND METHODS

The present research work was conducted in the Laboratory of Entomology of the Institute of Zoology of the ASM. The paper is based on the materials collected from different districts of Moldova, during the vegetation periods of the years 1991-2007, also on the collection of the Museum of Entomology Institute of Zoology covering the same period was used.

The faunistic material was collected from 45 localities in various biotypes: forests, skirt, (grassy vegetation, glades and different species of forest trees), in deciduous forests, pine plantations, parks, shelter belts, isolated plain forests, meadows, pastures on the hills and rocks, wet habitats near water basins and agricultural fields having different characters in terms of vegetation. Also the entomological material was collected from the reserves Padurea Domneasca, Plaiul Fagului, and Prutul de Jos.

The collection was performed by entomological sweep net, by cutting the grass vegetation, followed by selecting the hymenopterans with entomological vacuum and visually by collecting insect layings. Hymenopterans collected in the field were immediately immobilizes using ether. Then, in the laboratory, they are mounted and labeled according to the entomology standards.

To identify the species and to control their validity the following works were used: KOZLOV, 1978; KOZLOV & KONONOVA, 1983; KOZLOV & KONONOVA, 1990; KONONOVA, 1992; KONONOVA & KOZLOV, 2001.

RESULTS AND DISCUSSIONS

As result of the studies accomplished in Moldova, 59 species of scelionids from 20 genera were registered.

The material is presented in the form of a faunistic list that includes: number of individuals, gender, locality (arranged in the list on North-South direction) and author of the collection.

Abbreviations: Res. – Reserve, D. – District, OD – town, leg. – author of the collection.

Genus *Anteromorfa* DODD 1913

1. *A. frequens* (PRIESNER 1951) – Res. Plaiul Fagului (D. Călărași) 1♂-June 22, 2005, Băcioi (M. Chișinău) 1♂-July 3, 2006 leg. M. Gîrneț; Bucovăț (D. Strășeni) 1♀-July 2, 2007 leg. G. Manic.

Genus *Anteris* FOERSTER, 1856

2. *A. simulans* KIEFFER 1908 – Res. Plaiul Fagului (D. Călărași) 1♂- June 22, 2007 leg. M. Gîrneț.

Genus *Apegus* FOERSTER 1856

3. *A. minor* KIEFFER 1913 –Bucovăț (D. Strășeni) 1♀- July 2, 2007, Gura Bîcului (D. Anenii Noi) 1♂- July 3, 2006 leg. G. Manic.

4. *A. leptocerus* KIEFFER 1908 – Cioburciu (D. Ștefan-Vodă) 1♂-May 21, 2004 leg. V. Derjanschi.

Genus *Baeus* HALIDAY 1833

5. *B. siminulum* HALIDAY 1833 – Ustia (D. Dubăsari) 2♂-August 4, 2007 leg. M. Gîrneț; Horești (D. Ialoveni) 1♀-July 1, 1993, Costiujeni (M. Chișinău) 2♂-July 18, 1993 leg. I. Chiriac.

Genus *Eremioscelio* PRIESNER 1951

6. *E. cultratus* KOZLOV 1971 – Tudora (D. Ștefan - Vodă) 1♀-August 9, 2007 leg. M. Gîrneț.

7. *E. cydnooides* PRIESNER, 1951 – Res. Plaiul Fagului (D. Călărași) 1♀-August 18, 2005, Tudora (D. Ștefan - Vodă) 1♀-1♂-August 9, 2007 leg. M. Gîrneț.

8. *E. lymantriae* (MASNER 1958) – Res. Plaiul Fagului (D. Călărași) 1♂-June 22, 2007 leg. M. Gîrneț.

9. *E. tauricus* KOZLOV & KONONOVA 1990 – Res. Pădurea Domnească (D. Glodeni) 1♂-July 27, 2007 leg. G. Manic.

10. *E. ukrainika* KOZLOV & KONONOVA 1990 – Gura Bîcului (D. Strășeni) 1♂-September 18, 2007 leg. G. Manic; Grădinița (D. Ștefan-Vodă) 1♂-1♀-September 10, 2007 leg. M. Gîrneț.

Genus *Gryon* HALIDAY 1833

11. *G. monspeliensis* PICARD 1924 – Zăicana (D. Criuleni) 1♂-September 4, 2007, Calfa (D. Anenii Noi) 1♂-September 18, 2007, Tudora (D. Ștefan-Vodă) 1♀-August 9, 2007 leg. M. Gîrneț; Țiganca (D. Cantemir) 1♂-June 25, 2006, Bugeac (D. Cimișlia) 2♂-June 16, 2007, Roșu (D. Cahul) 1♀-June 25, 2006 leg. G. Manic; Slobozia Mare (D. Cahul) 1♂-June 16, 2007, Vulcănești 2♂-June 24, 2006 leg. M. Genus *Macroteleia* WESWOOD 1835

59. *M. rufa* SZELENYI 1941 – Res. Pădurea Pomnească (D. Glodeni) 1♀-June 16, 2006 leg. G. Manic.

CONCLUSIONS

Although previously the scelionid fauna of the Republic was studied to a certain extent five new species were recorded for Moldova.

Other new species will be recorded, because the collection of scelionids is rather complicated due to holding niches of these species, which are difficult to access in the ground and even in the aquatic environment.

The data collected can be used in the expanding of Cadastre of animal world of Moldova.

ACKNOWLEDGEMENTS

Many thanks to PhD. Popovici Ovidiu Alin ("Al. I. Cuza" University, Iași, Romania) for the help in the identification of the new scelionid species and scientific support.
